Simple Water Maintenance | Ozone-Mineral Block

Filling Or Refilling

Steps

- One Bottle of *Metal Gon*
- 4 Oz of *Spa Defender*
- Add *Mineral Block*
- Add 1-2 Caps of one of the following: *Renew, Replenish, Spa 56* (Chlorine)
- Test Water
- Add *Spa up* or *Spa Down* if needed

While the hot tub is drained you can use *Citra Bright* or Water and Vinegar to clean the shell of your hot tub. We recommend that you apply *Fast Gloss* to the shell to extend the life of your tub.

If you are refilling your tub make sure to take your filters out and clean them. You can take a 5 Gallon bucket and fill it with *Filter Clean* and water. Let your filters soak for 3 to 12 hours. Rinse filters with water then reinstall. For really dirty tubs use a bottle of *System Flush* while the tub is still full and the filters are out. This will flush all of the lines, and jets before you drain your tub.

Fill your hot tub and reinstall your filters. Turn the spa on, run the jets, and begin with the steps above.

Spa Covers: Cover Care & Conditioner every 3 months will extend the life of your cover.

Weekly Maintenance

Steps

- Test Water
- Add *Spa Up* or *Spa Down* if needed
- Add 2oz of *Spa Defender*
- Add small cap full of one of the following: *Renew, Replenish, Spa 56* (Chlorine)

While performing weekly maintenance run your hot tub on clean mode. If your hot tub does not have clean mode, run jets for 30 minutes.

Renew, Replenish, and Spa 56 should be used after every use. *Mineral Block* is your primary sanitizer, these other chemicals help oxidize or activate the *Mineral Block*. When hot tub is not in use, these chemicals are used once a week.

To remove oils, makeup, hair gel, and lotion use *Bright & Clear*. (Note *Bright & Clear* cannot be used the same day *Defender* is used.) For cloudy, Smelly water, first treat with *Defender* and one of the three sanitizers. If problem persists *Spa Algaecide* or *Enzyme* can be used to treat water.
